why should anyone care about the medium of communication today especially when talking about media law in today's digital society many emphasise convergence and seek new regulatory approaches in medium law however the medium theory insights of harold innis marshall mcluhan and the toronto school of communication are drawn upon as part of an argument that differences between media and technological definitions continue to play a crucial role in the regulation of the media indeed mac síthigh argues that the idea of converged cross platform medium neutral media regulation is unattainable in practice and potentially undesirable in substance this is demonstrated through the exploration of the regulation of a variety of platforms such as films games video on demand and premium rate telephone services regulatory areas discussed include content regulation copyright tax

we argue that the deregulation leading up to the big bang has played a major role in the current banking problems this deregulation allowed large corporations to quickly switch from depending on banks to relying on capital market financing we present evidence showing that large japanese borrowers particularly manufacturing firms have already become almost as independent of banks as comparable u s firms the deregulation was much less favorable for savers and consequently they mostly continued turning their money over to the banks however banks were also constrained they were not given authorization to move out of traditional activities into new lines of business these developments together meant that the banks retained assets and had to search for new borrowers their new lending primarily flowed to small businesses and became much more tied to property than in the past these loans have not fared well during the 1990s we discuss the size of the current bad loans problem and conclude that it is quite large on the order of 7 of gdp looking ahead we argue that the big bang will correct the aforementioned regulatory imbalances this will mean that banks will have to fight to retain deposits more importantly we expect even more firms to migrate to capital market financing using the u s borrowing patterns as a guide we present estimates showing that this impending shift implies a massive contraction in the size of the japanese banking sector

the field of affordable housing and community economic development in the united states has evolved since the 1960s it has

become a solid and complex industry building healthy communities a guide to community economic development for advocates lawyers and policymakers documents the themes and trends of the contemporary ced movement and provides guidance for strengthening our communities and ensuring that they and their residents prosper in today s global economy

since max weber there has been an active debate on the impact of religion on people s economic attitudes much of the existing evidence however is based on cross country studies in which this impact is confounded by differences in other institutional factors we use the world values surveys to identify the relationship between intensity of religious beliefs and economic attitudes controlling for country fixed effects we study several economic attitudes toward cooperation the government working women legal rules thriftiness and the market economy we also distinguish across religious denominations differentiating on whether a religion is dominant in a country we find that on average religious beliefs are associated with good economic attitudes where good is defined as conducive to higher per capita income and growth yet religious people tend to be more racist and less favorable with respect to working women these effects differ across religious denominations overall we find that christian religions are more positively associated with attitudes conducive to economic growth

this paper provides the first comprehensive econometric analysis of the causes of bank distress during the depression we assemble bank level data for virtually all fed member banks and combine those data with county level state level and national level economic characteristics to capture cross sectional and inter temporal variation in the determinants of bank failure we construct a model of bank survival duration using these fundamental determinants of bank failure as predictors and investigate the adequacy of fundamentals for explaining bank failures during alleged episodes of nationwide or regional banking panics we find that fundamentals explain most of the incidence of bank failure and argue that contagion or liquidity crises were a relatively unimportant influence on bank failure risk prior to 1933 we construct upper bound measures of the importance of contagion or liquidity crises at the national level we find that the first two banking crises identified by friedman and schwartz in 1930 and 1931

are not associated with positive unexplained residual failure risk or with changes in the importance of liquidity measures for forecasting bank failures the third banking crisis they identify is a more ambiguous case but even if one views it as a bona fide national liquidity crisis the size of the contagion effect could not have been very large the last banking crisis they identify at the beginning of 1933 is associated with important unexplained increases in bank failure risk we also investigate the potential role of regional or local contagion and illiquidity crises for promoting bank failure and find some evidence in support of such effects but these are of small importance in the aggregate we also investigate the causes of bank distress measured as deposit contraction using county level measures of deposits of all commercial banks and reach similar conclusions about the importance of fundamentals in determining deposit contraction

the main purpose of this research is to understand the patterns of consumption of addictive goods their economic and welfare consequences for society and the long run effect of tax policy in a dynamic general equilibrium model of rational addiction in contrast to prior research we allow individuals to make their consumption decisions simultaneous with savings and labor supply when addictive goods have a stronger habit formation effect an addiction effect individuals choose to save less due to the anticipated adverse health consequences of addiction a detrimental health effect this is particularly important since total savings pins down future productivity in the economy we also consider the role of peer influence in the choice of addiction and find that more peer pressure raises addictive consumption lowers savings and reduces productivity in light of the various distortions associated with addiction we conclude by studying the long run effects of an excise tax on addictive goods our calibration exercises suggest that incorporating capital formation and peer effects in a model of rational addiction are crucial for the design of public policy in particular accounting for peer externalities increases the optimal sin tax rate by more than 50 percent
